Hassle Free* USB and WiFi Gateway for WNTD installers!

Exclusive to **BSA**, and made in Australia by **UltraKeet Pty Ltd** using only the *finest* man tears; The device above attaches to the console port of a WNTD outdoor antenna, and shits out received data via both USB and WiFi

Up to three simultaneous devices are supported (in case some of you like to watch) - That's two connections via WiFi using a smartphone, tablet or laptop, and one via USB

It's supported by all modern platforms including Android, IOS, Windows and Linux; Based on long-established communications protocols likely used by Noah on his Ark

The unit contains four high quality Lithium Ion cells by Sanyo®, which are protected against short circuits, over-charging and under-charging. They're able to power the WNTD antenna for up to five hours, six if you push the friendship a little and like to be punished

It comes bundled with a USB Lead, C-tick approved wall charger, a fused car charger and an 8 metre RJ12 patch lead **-** All yours for **$320 inc GST** (and maybe a can of Red Bull)

Email Ahmad@UltraKeet.com.au for orders and/or abuse - As I'm also a field technician by day, a lead time of one to two weeks may apply while I'm busy pretending to work

Still not convinced? Look at these amazing reviews:

"Absolutely fantastic work Ahmad! But we're still not going to pay you for it." - Dane from the Sydney office

"UUUUNNNNHHHH"
- The guy who forgot to mute his porn

"Why is there so much froth in this coffee?"
- A former employer

PCB layouts, Schematics, Firmware and Utilities will be available free of charge (for personal use) soon'ish at http://wntd.UltraKeet.com.au - Feel free to build your own!

* May actually involve some hassle, partly depending on how shit WiFi performs in your work area. USB should always work
